

Move it  
up and  
turn it off!

**MAKE IT EASIER TO SAVE ENERGY**

Move your power strip up onto your desk.

**Electricity Conservation**

Save energy! Did you know that your computer is still using energy at night even after you put it to sleep or turn it off? Make sure you have a power strip and plug everything into it. Move your power strip up onto your desk and that little red light will remind you to turn it off at night. This will reduce the energy consumption down to zero and disconnect your machine in case of a power surge.

**Beautify:** put a framed photo in front of the plugs to keep your desk attractive. Just be sure to keep the red light visible.

**Students:** You can use the same strategy with most electronics you have plugged in: your chargers, your TV, your microwave, your coffee pot.
